1 UPGRADING FROM EARLIER VERSIONS

- Request a new license key from Aquaforest: sales@aquaforest.com.
- Uninstall the older version and install Tabula DX 1.30.
- Existing collections will not be deleted by the uninstall process and if the new version is installed in the same location (by default C:\Aquaforest\Tabula DX) then they will automatically be read by the new version.
- If the product has been installed to an alternate location, existing collections can be copied from the collections subfolder of the original installation.

1.1 License Key

- A new license key is required for production use of Version 1.30. Earlier version keys will not be recognized.

2 NEW FEATURES

2.1 Excluded Folders

- With tabuladx1.30 you can specify folders that are to be excluded from indexing.

2.2 New Text Extraction Engine

- A new text extract engine has been added in this release, this engine provides better text extraction compared to the previous engines and a third engine will minimize the probability of failure.
