1 INTRODUCTION

Kingfisher provides a set of operations for processing PDF files, this includes splitting, extracting pages, extracting text and renaming of the files. Kingfisher also provides the ability to set the security, metadata and other attributes of a PDF document.

What makes kingfisher standout is the ability to perform split, extract and rename operations based on text or barcode found in zones or coordinates in a PDF page. Our OCR engine ensures that this text regions are extracted as strings even though the PDF is an image only file, this also makes kingfisher have an edge over similar tools.

1.1 Installation

The installation MSI will guide you through the process of setting up Kingfisher.

1.2 System Requirements

- Server 2008, Server 2012, Server 2016,
- Windows 7 (64 bit), Windows 8 (64 bit), Windows 8.1 (64 bit), Windows 10 (64 bit).
- Microsoft .net framework 4.6.1
- 250Mb of disk space is required.

1.3 Licencing and Purchasing

Unlicensed versions are fully functional, but all generated PDF files will have the Aquaforest trial stamps on them.

When a license is purchased (see <u>http://www.aquaforest.com/en/tif_pdf_buy.asp#collapseEleven</u>) a permanent license key will be issued for use with the product which should be entered using the Options tab of the GUI. There is no need to download another version of the software.

1.4 Version Breakdown

	Standard	Professional	Server
	Smart PDF Splitting and Renaming.	Smart PDF Data Extraction, Splitting and Renaming.	Automated Smart PDF Data Extraction, Splitting and Renaming.
Split PDF by Content, Barcode or Page Ranges	\checkmark	V	V

2 KINGFISHER WINDOWS INTERFACE

When Kingfisher is launched, the main window is displayed as shown below. This allows the definition, saving and running of jobs.

Dashboard Job Settings Options Help & Support

Service Status : Running

+ Add New Job						
OPERATION	JOB ID	JOB NAME	SCHEDULE	LAST RUN	RUN STATUS	
Rename based on Text Match	10000	Job 10000	Manual	07 Dec 2017 15:31	Finished	
Advanced Export to CSV/XLSX	10001	Job 10001	Manual	07 Dec 2017 16:33	Finished	
😨 Extract Pages Based on Text Match	10002	Job 10002	Manual		Not Yet Run	
Rename based on Text Match			Manual		Not Yet Run	
I Rename on Text Match & Barcode	10004	Job 10004	Run Once	07 Dec 2017 16:55	Finished	
← → Split File based on Barcode	10005	Job 10005	Run Once	07 Dec 2017 16:46	Finished	

This section will explain all the components of the Kingfisher Graphical User Interface

2.1 Dashboard

The kingfisher Dashboard contains a list of all the jobs defined in kingfisher, you can start/stop jobs by clicking the "Play" and "stop" button by the side of the job name, right clicking on a Job also gives some options as shown on the image above.

Screen Field / Button	Description
Add New Job	This button launches a wizard to create a new kingfisher job.
Stop Job	Stops an already running job.
Run Job	It is represented by the play button, clicking on it runs the job associated with the button.
Edit Job	This can be accessed by either right clicking the job or clicking the button with the pen icon, use this option to Edit a job, or just double click on the job.
Сору Јоb	Use the copy job in the context menu to make a duplicate of the currently selected job.
Delete Job	Use the delete job in the context menu to delete the currently selected job.
Clear Error	Use this option to clear errors of jobs in error before running them.

2.2 Job Settings

Dashboard Job Settings Options Help & Support

Job Definition Select Variables Scheduler Alerts File Naming Advanced Settings Running Job

Enter the Name of the Job and Select Operation	Location Details	
Job ID	Single File Folder Tree	
10000	Source	
Job Name	J:\QA Folder\Kingfisher QA\Input\Barcode\sample_merge.pdf	
Job 10000	Destination	Same as Source
Select Operation	J:\QA Folder\Kingfisher QA\Input\Barcode	=

		Overwrite Existing Files
	Max Cores	

Screen Field / Button	Description
View Log File	Clicking this button will display the last generated log file of the selected rule.
Save	Clicking this button will save all the changes in the rule.
Run	Clicking this button will execute the rule on the selected files.
Stop	Clicking this button will halt the processing of the current batch of files at the earliest convenience.
Delete Job	Clicking this button will delete the currently selected job.
Сору Јоb	Clicking this button will to make a duplicate of the currently selected job.
Clear Error	Use this option to clear errors of jobs in error before running them.
Explore Destination	Clicking this button will open the target folder in windows explorer, if the folder does not exist, it will display an error message.

Service Status : Running

2.2.1 Job Definition

Job definition contains the common job properties that need to be set for the job to be executed.

Screen Field / Button	Description
Job Name	This is used to identify a job by the user, a default name will be generated when you create a new job, it is always a good practice to give the jobs sensible names when you create them.
Select Operation	Use this combe box to set the operation you want to carry out, there are nine options to choose form. Check section 4 for more details. • Rename PDF File • Split PDF Files • Extract Pages from PDF Files • Extract Content from PDF Files
Source Type	File Folder Tree
Create Folders	If this is checked, Kingfisher will create the target directories if they do not exist.
Overwrite Existing Files	If checked, generated PDF files will overwrite existing files of the same name (but not source files).
Continue on Error	When checked, folder and tree processing jobs will continue when individual files fail.
Debug	If switched on the job log will be more detailed
Max Cores	Sets the number files that should be processed in parallel.
Case Sensitive	Setting this to true will make sure all the searches, text operations and pattern matching will be performed in a case sensitive fashion.
OCR	If switched, Kingfisher will use OCR to locate the text on the PDF document, this is good for image PDFs and PDF file with Encoding.
Source	The source PDF file or directory.
Destination	The location where the generated PDF file(s) will be placed. This can be set to be the same as the source location. Note that Kingfisher cannot overwrite source files, a new file is always made.
Log File	The path to the log file for the current rule, you can use the %TIMESTAMP% and %DATESTAMP% variables to create log files based on dates or time.

2.2.2 Select Variables

One of the most attractive features of kingfisher is the ability to select text or barcode at a position in a PDF page, the selected text or barcode can be used to:

- Decide whether to split the document at the page where the text of barcode was found.
- Decide whether to extract the page where the text of barcode was found.
- Use these extracted text or barcode values to rename the file

The "Select Variable" tab is used to select four variables named:

- "%VALUE1%": This is used to decide the split or extract page, it is also used to generate the output file name, note this must be selected for some jobs to run.
- "%VALUE2%": This is used to generate the output file name.
- "%VALUE3%": This is used to generate the output file name.
- "%VALUE4%": This is used to generate the output file name.

To assign a zone to a variable, you should first choose the zone on the PDF page with your mouse, click the camera icon associated to the variable you want to assign the zone to. If you do not assign a zone to the variable, kingfisher will assume you want to use the whole page as a zone. You will notice the "Selected Zone" Text Box change from "all" to the coordinates you selected.

Select	Use this drop-down box to specify the text you want to extract relative to a word/value. See section 2.2.2.1 for more details.
Where	Use this Drop-down box to specify if a regular expression should be used to match the selected text. See section 2.2.2.3 for more details.
Refine Extracted Text	Click this link to refine the text extracted. See section 2.2.2.4 for more details
Page Number	You can specify specific pages to want Kingfisher to check for certain values.
All Pages	Click this button to make Kingfisher search for the values on all pages.

2.2.2.1 Text Match Option

When extracting text, Kingfisher give you the ability to select text that is relative to a word/value. The table below gives to the various options available and what they mean.

Screen Field / Button	Description
Select	 text in zone: This option will select all the text that was extracted. word after value: If this option is selected, kingfisher will return the word that appears immediately after the word supplied in the text box. Word Before value: If this option is selected, kingfisher will return the word that appears immediately before the word supplied in the text box. all text In Line after value: If this option is selected, kingfisher will return all the words that appear on the same line after the word supplied in the text box. all text In Line before value: If this option is selected, kingfisher will return all the words that appear on the same line after the word supplied in the text box. all text In Line before value: If this option is selected, kingfisher will return all the words that appear on the same line before the word supplied in the text box. all text In Line before value: If this option is selected, kingfisher will return all the words that appear on the same line before the word supplied in the text box. all text In Line after value: If this option is selected, kingfisher will return all the words that appear on the same line before the word supplied in the text box.

	1. See Colored 2011 and the state of the sta	
	kingfisher will return all the words that appear in the selected	
	zone after the word supplied in the text box.	
	• all text In Zone before value: If this option is selected,	
	kingfisher will return all the words that appear in the selected	
	zone before the word supplied in the text box.	
	• all text in paragraph before value: If this option is selected,	
	kingfisher will return all the words that appear in the	
	paragraph before the word supplied in the text box.	
	all text in paragraph after value: If this option is selected,	
	kingfisher will return all the words that appear in the	
	paragraph after the word supplied in the text box.	
Pattern	• Where text matches any pattern: This option will not match	
	the text to any pattern	
	Where text matches pattern: Provide a Regular expression	
	here to match the extracted text to, this will be explained	
	more below.	

2.2.2.2 Barcode

When extracting Barcode, you can choose the barcode format you are interested in.

Screen Field / Button	Description			
Barcode Type	This combo box allows the user to select the barcode the they			
	want to extract, below is the list of barcode types that kingfishe			
	can recognize			
	Aztec 2D barcode format.			
	CODABAR 1D format.			
	Code 39 1D format.			
	Code 93 1D format.			
	Code 128 1D format.			
	Data Matrix 2D barcode format.			
	• EAN-8 1D format.			
	• EAN-13 1D format.			
	• ITF (Interleaved Two of Five) 1D format (Code 25).			
	MaxiCode 2D barcode format.			
	PDF417 format.			
	QR Code 2D barcode format.			
	• RSS 14			
	RSS EXPANDED			
	UPC-A 1D format.			
	UPC-E 1D format.			
	• MSI			
	• Plessey			

2.2.2.3 Text Pattern Option

Kingfisher allows the user to define the type of text that is extracted from the PDF document. This is to prevent unwanted text to be extracted just because it happens to be in the same location as the text the user is interested in. For example, a user might want a phone number, but a postcode gets extracted just because it was present in the same location as the postcode on a different page. Kingfisher provide pattern matching so that a user can make sure the text that is extracted is properly validated before it is accepted.

Patterns are used to match parts of the document. Some useful examples are below. For a complete reference on patterns including advanced examples see section *17 of the reference guide.

Pattern	Matches	Examples
invoice	The word "invoice"	
invoice no:	The phrase "invoice no:"	
	Any 1 character	A
		9
		%
	Any 4 characters	12ab
		\$5.00
Invoice	The word invoice followed by any 4	Invoice 123
	characters. A space is a character.	Invoice No:
		Invoice A9-
^invoice	The word invoice at the start of a	
	line	
invoice\$	The word invoice at the end of a	
	line	
[0-9] [0-9] [0-9]	Any 3 digits	123
		900
[a-z] [a-z] [a-z]	Any 3 alphabetic characters	abc
		Inv

2.2.2.4 Refine Extracted Text

Regular expressions can be a bit advanced for the regular IT administrator, as a result we have added a simpler way to refine text in the new version of kingfisher. This simply entails removing/replacing certain text patterns or values.

ADVANCED TEXT PROCESSING					- • ×
Replace text from extracted text in zone.					+ Add Item
Task	Pattern	Value to replace with	Inclusive/Exclusive	Case Sentitive	
Remove everything before the last occurrence of text matching	V.		Exclusive 💌	No	Î
Replace the word after the last occurrence of text matching	V	New	Exclusive 💌	No	Î

5

Option	Explanation
Task	The first part of the task is whether to remove or replace the pattern provided, the next part
	deals with the position and the frequency of the removal or replacement.
Pattern	The pattern to search for, this can be a regular expression.
Values to replace	If you choose to replace a pattern, you will have to provide a substitute value in this text box.
with	
Inclusive/Exclusive	When you chose Inclusive, kingfisher will remove all the text specified including the pattern
	being matched. When you choose Exclusive, kingfisher will remove all the text specified
	without the pattern being matched.
Case Sensitive	This option tells kingfisher whether to use a case sensitive approach or not.

2.2.3 Scheduler

This tab allows to set how job are ran in kingfisher

Job Definition Select Variables Scheduler Alerts File Naming Advanced Settings Running Job

 Manual 			
Once per day			
At :			
2:18:13 PM	Ö		
Continuous			
Every:			
10 + -		Minutes	Ŧ
Between		And	
12:00:01 AM	Ċ	11:59:00 PM	Ö
Run once			
On :			
	15		
At :			
2:18:13 PM			

Setting	Description
Manual	This means that the document library has to be run manually by clicking on the "Run" button on the dashboard.
Once per day	This allows the document library to be scheduled to run at a specified time each day.
Continuous	This allows the document library to be scheduled to run periodically between a start time and end time each day. The periods may be minutes, hours, days or months. For example, a document library may be specified to run every 1 hour between 9:00 and 17:00.
Run Once	This allows the document library to be scheduled to run only once at a specified time.

2.2.4 Alerts

Use this tab to set email alerts for jobs.

Job Definition Select Variables Scheduler Alerts File Naming Advanced Settings Running Job

Ema		0					
Em:	211	~	0	TTI	n	\sim	C .
		0		ιu		u	

From Email Address:

%JOBNAME% %STATUS%	
Email Message:	Test Email
Processing of Job: '%JOBNAME%' completed with status: '%STATUS%' . Log file: %LOGFILE%	
Send Error Alert	Send Success Alert

Setting	Description
From Email Address	The email address to send the email from.
To Email Address	The email address to send the email to.
Email Subject	The email subject. You can use the following templates: %JOBNAME% - will be replaced by the name of the library
	%STATUS% - will be replaced by "success" or "error" depending on whether the job ran successfully or not
Email Message	The email message to send. You can use the following templates: %JOBNAME% - will be replaced by the name of the library %STATUS% - will be replaced by "success" or "error" depending on whether the job ran successfully or not
	%LOGFILE% - will be replaced by the path of the log file.
Send Error Alert	Switch this on to send an alert when a job ends in an error.
Send Success Alert	Switch this on to send alerts when the job successfully completes.

2.2.5 File Naming

Renaming output file is one of the most attractive and robust features of Kingfisher. Kingfisher offers various variables that allows the user to customize the final output name. These variables range from Text/Barcode values extracted from the PDF document to other predefined variables. Kingfisher also gives the user the ability to write scripts to generate the file name.

In kingfisher, output file names can be generated in two ways:

2.2.5.1 Name Template

You can enter a string in the name template text box, any occurrence of variables in the table below will be replaced by the appropriate value at runtime.

%VALUE1%	The primary barcode/text value
%VALUE2%	The barcode/text value(s) found.
%VALUE3%	
%VALUE4%	
%INDEX%	The current index of the
%PAGENUMBER%	the current split index for the current value
	(used with extract)
%FILENAME%	the original file name without the .pdf
	extension
%PAGESTART%	Start page number
%PAGEEND%	End page number
%BOOKMARK%	This represents the bookmark name and can be
	used with the "Split by Top Level Bookmarks"
	split option only
%TIME%	The current Time
%DATE%	The current Date
%RUNDATE%	The Time at which the job was executed, the
	difference between this and the %TIME%
	variable is that this value will be same for all
	files processed in a single job run.
%JOBNAME%	The Name of the Job

Job Definition Select Variables File Naming PDF Setting

Use Name Template

Name Template

%VALUE1%_%VALUE2%			
Variable	Description		
%VALUE1%			
%VALUE2%			
%FILENAME%	Replaced By the Name of the Original File		
%DATE%	Replaced By The Current Date		
%TIME%	Replaced By The Current Time		
%PAGENUMBER%	Replaced By The Page Number Where the Text/Barcode Was Found		
%PAGESTART%	Replaced By The Start Page Number of a Split PDF		
%PAGEEND%	Replaced By The End Page Number of a Split PDF		
%INDEX%	Replaced By The Split or Extract Index of a file.		
%BOOKMARK%	Replaced by the Bookmark title, Use this with split by bookmark.		

Using the image below as an example, if the document below is to be renamed,

Using "%VALUE1%\\Technical%VALUE2%" as the File Template will create a file named "TechnicalPatent" in a folder named "HP21 4LA".

HP21 4LA	%VALUE1%		
	United States Gutterman	Patent -	US006409467B1

2.2.6 Advanced Settings

This tab contains some advanced settings that would allow define the output PDF and provide some OCR settings.

Select Trigger File	

Option	Description	
Custom Script File		
Execute the script below	Switch this on if you want to execute a .wsf file after each	
after each fie	output file is produced. We send the following arguments:	
	"newfilename" and "oldfilename".	
Custom Script File	The location of the script file.	
Trigger File		
Use Trigger File	When this option is switched on, a kingfisher job will not start if	
	a trigger file specified is not available.	
Delete Trigger File After	King fisher will delete the trigger file after the job completes if	
Job	this option is turned on.	
Select Trigger File Use this control to provide the trigger file name and location		
Output PDF		
Output PDF Page	Choose the rotation of the output PDF pages.	
Rotation		
Retain Bookmarks	Set to true to retain the bookmarks in the output PDF file.	
Temporary Folder	You can change the temp folder using this directory browser	
	control.	
Csv Log File	The csv log files contain a summary of the new file names	
	generated by kingfisher.	

2.2.7 Running Job

This tab has two elements explained below:

- Task Log: This text area displays the progress of the current job being run.
- **Explore Destination:** This button opens the destination folder if it exists.

AQUAFOREST KINGFISHER TEMPORARY LICENSE Dashboard Job Settings Options Help & Support Service Status : Running Job Definition Select Variables Scheduler Alerts File Naming Advanced Settings Running Job Starting New Job 10000 Job At 10:54:29. 3 KINGFISHER OPERATIONS

Kingfisher has 4 main operations which are:

- Rename PDF File
- Split PDF File
- Extract Pages from PDF File
- Extract Content from PDF File

To select an operation, select one of the Main Operations in the "Select Operation" combo-box.

Select Operation	
Rename PDF File 🔹	
Rename PDF File	
Split PDF File	
Extract Pages From PDF File	
Export PDF Content	

Each of the operation listed above are further divided into sub-categories, the section below explains each of this operations in more details.

3.1 Rename PDF File

Select Operation		
Rename PDF File		•
Rename based on Text Match		•
Files With No Match		
Copy to Output and Rename	•	
L		

File Name

%filename%

Option	Description
Files With No Match	This gives the user three options of what to do with files that do not match the text or barcode criteria specified by the user.
	 Do Not Copy to Output Copy to Output Copy to Output and Rename
File Name	If the "Copy to Output and Rename" option is selected you will need to provide a filename mask like the one in the "File Naming" tab, the table below gives you a breakdown of the variables available.

%FILEN/	AME%	The original file name without the .pdf extension
%ВООК	MARK%	This represents the bookmark name and can be used with the "Split by Top Level Bookmarks" split option only
%TIME%	6	The current Time
%DATES	6	The current Date
%RUND	ATE%	The Time at which the job was executed, the difference between this and the %TIME% variable is that this value will be same for all files processed in a single job run.
%JOBN/	AME%	The Name of the Job

3.1.1 Rename Based on Barcode

This Operation will take a PDF file that has barcodes in its pages as an input and renames the PDF file based on the value of the barcode. You can also specify Areas on the PDF page; kingfisher will check these Areas and use the barcode present there. If no Areas are selected, kingfisher will use the first barcode it encounters in the PDF document.

3.1.2 Rename Based on Text Match

This step is like the step above except that it uses text in the PDF document to rename the file. Unlike the barcode step, an Area must be selected for this step to work. You can also specify Regular Expressions and Words that appear before/after the word you want the file to be named to. These extra features are to help you validate the text you select.

3.1.3 Rename Based on Barcode and Text Match

This step is a combination of the two steps above, it allows a user to specify barcodes and text on a PDF page that the file can be renamed to.

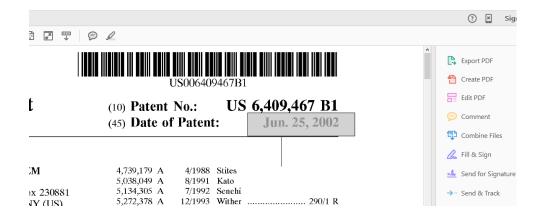

3.2 Extract Pages from PDF File

Select Operation Extract Pages From PDF File Extract Pages from File based on Text Match Extract Pages from File based on Text Match Extract Pages from File based on Barcode

3.2.1 Extract Pages from File based on Text Match

This step allows you to extract single pages form a PDF file based on the presence of a text value in a zone. For example, in the image below you might want to extract any page that has a date value (Jun. 25, 2002) at that location, all you need to do is to is to set up an "Extract Pages from File based on Text Match" job, select the zone and provide some pattern matching to make sure a date is extracted.

Kingfisher also give you the ability to rename the output file base on the text extracted from the PDF page.

The extract step has the following settings Output File Options

Extract PDF Page(s) Options

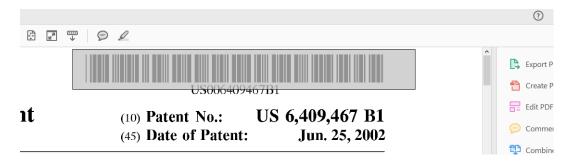

Extract As Single Pages	•
Extract As Single Pages	
Merge All Extracted Pages	
Merge Extracted Pages On Unique Expressions That Match	

Screen Field / Button	Description
Extract as Single Pages	This option copies all the extracted pages as single page PDF files to the output folder.
Merge All Extracted Pages	Merges all the pages that were extracted into one document.
Merge Extracted Pages on Unique Expressions That Merge	Merges All the Extracted pages that have equal "%VALUE1%" values

3.2.2 Extract Pages from File Name based on Barcode

This step allows you to extract single pages form a PDF file based on the presence of a barcode value in a zone. For example, in the image below you might want to extract any page that has a barcode at that location, all you need to do is to is to set up an "Extract Pages from File based on Barcode" job and select the zone you are interested in. If no zone is selected the first barcode found in a page will be used.

Kingfisher also give you the ability to rename the output file base on the value extracted from the PDF page.

The extract step has the following settings

Output File Options

Extract PDF Page(s) Options

Extract As Single Pages	•
Extract As Single Pages	
Merge All Extracted Pages	
Merge Extracted Pages On Unique Expressions That Match	

Screen Field / Button	Description
Extract as Single Pages	This option copies all the extracted pages as single page PDF files to the output folder.
Merge All Extracted Pages	Merges all the pages that were extracted into one document.
Merge Extracted Pages on Unique Expressions That Merge	Merges All the Extracted pages that have equal "%VALUE1%" values

3.3 Split PDF File

Select Operation

Split PDF File

Split File based on Text Match	•
Split File based on Text Match	
Split File based on Text Change	
Split File based on Barcode	
Split File based on Page Ranges	

3.3.1 Split File based on Text Match

The split option is like the extract option except that instead of extracting a single page, it will split the file into pages using the pages that matches the text value as a divider.

•

 Split File based on Text Match

 Output File Options
 Page That Matches Text on First Page
 Pages With No Match
 Copy to Output and Rename
 %filename%

Screen Field / Button	Description	
Pages That Matches on First Page	This option puts the page that matches the text value as the first page in the output file.	
Pages That Matches on Last Page	This option puts the page that matches the text value as the last page in the output file.	
Remove Page That Matches Text	This option removes the pages that match the text expressions in the output files.	
Pages with No Match	 This gives the user three options of what to do with pages that do not match the text or barcode criteria specified by the user. Do Not Copy to Output 	
	Copy to Output	
	 Copy to Output and Rename 	
File Name	If the "Copy to Output and Rename" option is selected you will need to provide a filename mask like the one in the "File Naming" tab, the table below gives you a breakdown of the variables available.	

%FILENAME%	The original file name without the .pdf extension
%BOOKMARK%	This represents the bookmark name and can be used with the "Split by Top Level Bookmarks" split option only
%TIME%	The current Time
%DATE%	The current Date
%RUNDATE%	The Time at which the job was executed, the difference between this and the %TIME% variable is that this value will be same for all files processed in a single job run.
%JOBNAME%	The Name of the Job

3.3.2 Split File based on Text Change

The split option is like the "Split File based on Text Match" option except that instead splitting very where there is a text match, it waits until the text that was matched has changed from the one on the previous page.

-

Split File based on Text Change

Output File Options

Page That Matches Text on First Page

Pages With No Match File Name Copy to Output and Rename • %filename%

Screen Field / Button	Description
Pages That Matches on First Page	This option puts the page that matches the text value as the first page in the output file.
Pages That Matches on Last Page	This option puts the page that matches the text value as the last page in the output file.
Remove Page That Matches Text	This option removes the pages that match the text expressions in the output files.

3.3.3 Split File based on Barcode

The split option is like the extract option except that instead of extracting a single page, it will split the file into pages using the pages that matches the barcode value as a divider.

Split File based on Barcode		
Output File Options		
Barcode on First Page	•	

Pages with No Match		File Name
Copy to Output and Rename	,	%filename%

Screen Field / Button	Description
Barcode on First Page	This option puts the page that matches the barcode value as the first page in the output file.
Barcode on Last Page	This option puts the page that matches the barcode value as the last page in the output file.
Remove Barcode Page	This option removes the pages that match the barcode value in the output files.

3.3.4 Split File based on Page Ranges

This split operation uses characteristics like page numbers and bookmarks are to split PDFs documents, Has four split options.

- Split into Single Pages: Split the PDFs into single pages
- Split by Top Level Bookmarks
- Split by Page Ranges
- Split by Repeating Page Ranges

Screen Field / Button	Description		
Split Type	One of: Split into single pages Split by top-level bookmarks Split by page ranges (See below) Split by repeating page ranges (See below)		
Page Ranges	Set of page ranges separated by commas that defines which pages from the original should be extracted. The following types of page ranges are allowed:		
	1	Specifies a single page	
	1-3	Specifies a range of pages	
	10-20even	Specifies even pages within the range	
	10-20odd	Specifies odd pages within the range	
	20-lastpage	Note that <i>lastpage</i> can be used to represent the last page in the document.	
Repeating Range	 Apply the page range at an interval of the repeating number. For example, if 2-4 is specified for page ranges, and 4 is specified as the repeating range, then the range is re-applied every 4 pages. Hence the file is split such that the first output file contains pages 2-4 from the original document, the second contains pages 6-8 and so on. 		

3.4 Extract Content from PDF File

Select Operation	_
Export PDF Content	•
PDF to Text	•
PDF to Text	
PDF to CSV/XLSX	
Advanced Export to CSV/XLSX	

3.4.1 Extract Text from PDF File

This step simply extracts all the text in a PDF file, Kingfisher is intelligent enough to detect image PDF pages and OCR before extracting any text from it. The only type of files we can't extract meaningful text from by default are the ones with font encoding, we advise users to switch OCR for these file types.

Select Operation		
Extract Text From PDF		•
Start Page	End Page	

Screen Field / Button	Description
Start Page	Page number of the page you want Kingfisher to start extracting text from.
End Page	Page number of the page you want Kingfisher to stop extracting text from.

3.4.2 PDF to CSV/XLSX

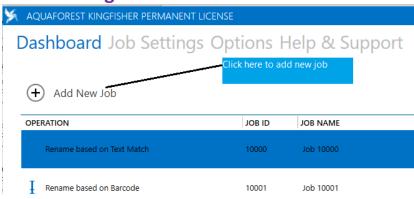

This step is used to extract tabular data from PDF files, see section 5 for more details.

3.4.3 Advanced Export to CSV/XLSX

This step extracts text that appears before/after certain expressions, see section 6 for more details.

4 CREATING AND RUNNING JOBS WITH THE **GUI**

4.1 Creating a new Job

To create a new job in Kingfisher, click on the "Add New Job" button, this will launch the new job wizard shown below.

🕅 Aquaforest Kingfisher - Crea	ate New Job Wizard
Steps	
Introduction	Welcome to the Aquaforest Kingfisher Job Creation Wizard
Job Definition	This wizard will guide you through the different steps required to create a new Aquaforest Kingfisher Job.
Select Variables	To continue, click Next.

Alerts	
File Naming	
Advanced Settings	
Finish	
Help	Previous Next Preview Save Job Cancel

Follow the steps below to create a new job

Click on the next Button at the bottom of the wizard, this takes you to the "Job Definition Tab". Check section
 2.1.3 for explanation of the fields in this window, choose the suitable options for the job and press next.

Steps		
Steps Introduction Job Definition Select Variables Scheduler Alerts File Naming Advanced Settings Finish Rename DDF File Rename based on Text Match Files With No Match Do Not Copy to Output	Location Details	Same as Source

2. One of the main advantages of Kingfisher is the ability to process pdf files based on the file content. To do this, we have created a zone definer to allow users select areas on the pdf page they want to extract text or barcode values from, the "Select Variable" contains the zone definer as shown below.

Aquaforest Kingfisher - Create New	Job Wizard
Introduction Job Definition Select Variables Scheduler Alerts	Kingfisher Variables Add Item (+) (-) (10%) (-)
File Naming Advanced Settings	Wobben (45) Date of Patent: *Mar. 26, 2002

? Help	Previous Next Preview Save Job

To assign the patent number at the top right corner of the page to the variable named "%VALUE1%", follow the steps below

• Select the "Use Text" option associated with "%VALUE1%".

Column Header	%VALUE1%
Selected Zone	all 💿 📀
Capture	🔵 Barcode 🌔 Text
Select	text in zone 🔹
Where	text matches any pattern 🔻
	Refine Extracted Text
Page Number	1 + - All Pages
	Use Text

• Now select the zone at the top right corner

• Click on the "Camera Icon" in the line on the "Selected Zone" Text Box, you will see the text below, if you want to extract the number alone you can refine your option further by clicking the "settings" button.

(10) Patent No.: US 6,409,467 E1			
Selected Text Matched Pattern.			
xtraction Log			
Text Extracted] 10) Patent No.: US 6,409,467 E1			
			Done

- Click on the Select text in zone combo box, choose the "Select all text in zone after value" option and provide "Patent No.:" as the value.
- Click on capture again to make sure the changes you made worked.

CAPTURED TEXT		
US 6,409,467 E1 Selected Text Matched Pattern.		
Extraction Log		
[Text Extracted] US 6,409,467 E1		
		Done

To assign the barcode at the top right corner of the page to the variable named "%VALUE2%", follow the steps below

• Click on the "Add Item" Button at the top of the "Kingfisher Variables" Group Box.

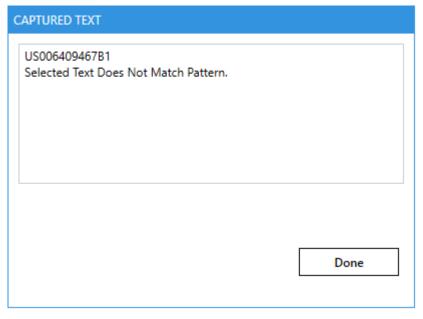

• Select the "Barcode" option associated with "%VALUE2%". Column Settings

Column Header	%VALUE2%
Selected Zone	all 💿 ⊘
Capture	Barcode Text
Barcode Type	All 🗸
Where	text matches any pattern 🔹

• Now select the zone at the top right corner

• Click on the "Camera Icon" button, you will see the text below

3. Set up the scheduler, we will use manual for this test.

Steps		
Introduction	Manual	
Job Definition	Once per day	
Select Variables	At :	
Scheduler	1:04:51 PM	
Alerts	Continuous	
File Naming	Every:	
Advanced Settings	10 + Minutes	Ŧ
Finish	Between And 12:00:01 AM 11:59:00 PM	Ö
	C Run once	
	On :	
	1/4/2018 15	
	At : 1:04:51 PM	

4. Set the alerts, we will not use alerts for this example.

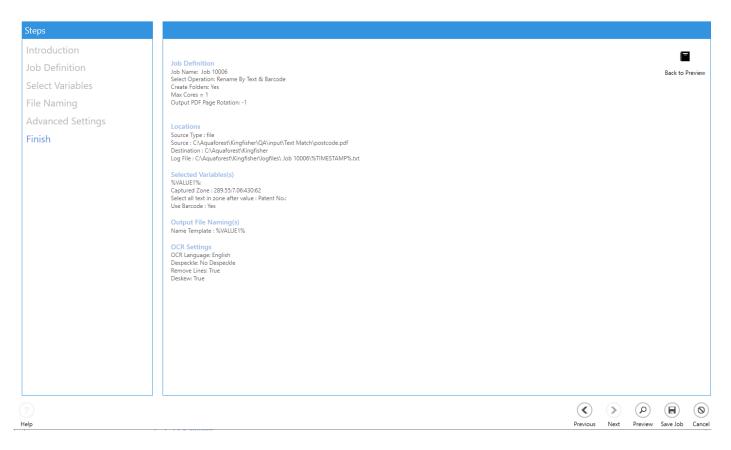

5. After setting the "Scheduler" and "Alerts", click next to go to the "File Naming" tab, this allows you to specify a template for the output file, for this example, we are goin to use the two variables we selected in the previous tab, "%VALUE1%_%VALUE2%", after you choose a suitable template, click the "next" button.

iteps		
troduction		
b Definition	Name Template %VALUE1%_%VALUE2%	
elect Variables		
cheduler	VARIABLE	DESCRIPTION
	%VALUE3%	
lerts	%VALUE4%	
- ile Naming	%FILENAME%	Replaced by the Name of the Original File
-	%DATE%	Replaced by The Current Date
Advanced Settings	%TIME%	Replaced by The Current Time
inish	%PAGENUMBER%	Replaced by The Page Number Where the Text/Barcode Was Found
	%PAGESTART%	Replaced by The Start Page Number of a Split PDF
	%PAGEEND%	Replaced by The End Page Number of a Spl PDF
	%INDEX%	Replaced by The Split or Extract Index of a file
	%BOOKMARK%	Replaced by the Bookmark title, Use this with split by bookmark
	%RUNDATE%	Replaced by the DateTime of when the job started running, so all the files in the folder or tree will share the same RUNDATE.
	%JOBNAME%	Replaced by the name given to the job.

6. The "Advanced Settings" tab allows the user to provide properties of the output PDF file, it also provides a few OCR settings, for more information check section 2.3. After you are through with the settings, click next.

5 EXTRACT TABULAR DATA FROM PDF

Select Operation			
Export PDF Content			•
PDF to CSV/XLSX			•
Output File	Арр	end Data to E	xisting File
.xlsx	• True	1	•
		lf you wan	t to extract all the files

Append As WorkSheet

Screen Field / Button	Description
Output file	 csv: Produces a simple csv file. xlsx: Produces and Excel File
Append Page Data to Existing File	If set to true, instead of overwriting the output file, kingfisher will append the contents to the end of the current file.
Append as WorkSheet	When on, this will make kingfisher add an extra worksheet for each PDF file, instead of appending the data at the end on the first Worksheet.

Aquaforest Kingfisher has the capability of recognizing tables in PDF files with very minimal user intervention. The tabular data it extracts is usually written to a csv or excel file.

To extract all the tables recognized in the PDF file to the csv file you can just load the input file and run the job. If you want to tailor the extraction further and group the tables to your own liking, you can read the section below.

The Kingfisher Table control is divided into 2 tabs called the "Document View" and the "Table View"

5.1 The Document View

This tab shows a visual representation of the PDF file and the table recognized on the file, the table are usually highlighted. Below is a screen shot showing the Document View tab.

The document view usually shows the table recognized in the first 10 pages, this value can be changed as shown in the table below. It also provides some properties that could be changed to alter the way the tables are recognized, read the table below to see what each property represents.

oom in/Out Pages Reload Tables	Aquaforest Software	Keywords	Latest Release	•
Jse First Table To Derive All Table	Autobahn DX	High performance	4.02	U
Jse Table Lines To Detect Tables	Kingfisher	Extraction	1.1	
Extract Only Grouped Tables	Searchlight	SharePoint	1.2	
Use Word Cordinates To Detect Tables	PDF Junction	PDF	3.4	
On Minimum Table Gap	TIFF Junction	OCR Table II	D : Ó·Ġroup ID : 1	
50	Tabula DX	Search Engine	1.4	
Number of Pages To Check	TIFF Server	TIFF Viewer	4.0	

lob Definition Select Variables File Naming Advanced Settings Running Job

Document View Table View

Value	Details
Zoom in/Out	You can use this to zoom in or zoom out of the file loaded in the table viewer control.
Pages	Use this control to move through the pages of the loaded file.
Reload Tables	Clicking this button will make Kingfisher reload the tables in the PDF file, this allows you to change some settings and reload the tables in the file after the file has been processed.
Crop Table	Switching this on will allow the user to specify an area where kingfisher should check for tables, this method produces more accurate result because it eliminants any possible noise.
Do Not Write Header to Output	Switching this on will not write the Group Header to the output file, this is important if you want to write similar table data from multiple files to one output file, it will preserver continuity.
Use First Table to Derive All Tables	This setting instructs Kingfisher to use the first table in the file as a template to recognise all the other tables in the file.
Use Table Lines to Detect Tables	If set to true, Kingfisher will use the PDF graphic line to find the tables in the file.
Use Word Coordinates to Detect Tables	This setting instructs King fisher to use the coordinates of words on a page to recognise tables
Extract Only Grouped Tables	Kingfisher gives the user the ability to group tables depending on different rules, turning this setting on will write only the tables grouped to the csv file
Number of Pages to Check	The process of table recognition is CPU intensive; thus, kingfisher limits the number of tables displayed in the GUI to the first 10 pages. You can increase or reduce it using the textbox.
Minimum Table Gap (pt)	Once the space between two adjacent lines exceed the value given here, the first line will be interpreted as the end of the table.
Table Space (pt)	Once the space between two words exceed this value, kingfisher will recognise that space as a column, note if the value is 0 or less, kingfisher will ignore this and work out the space automatically.
Minimum Number of Rows	Only tables with number of rows greater than or equals to this value will be picked up
Minimum Number of Columns	Only tables with number of columns greater than or equals to this value will be picked up

5.2 Table View

The Table View shows the data that was successfully extracted from the PDF file, it is divided into two parts explained below:

- The controls on the left are divided into two tabs named "Tables" and "Grouped Tables", the tabs. They contain a list of tables found and some other controls for grouping tables.
- The right part contains a Data grid which displays the data in the Table/Grouped Table Selected.

Tab contain Table found results more	is controls to refine e.			
			f the Selected Ta n in a datagrid.	ble/Grouped
		\bigcirc		

The next section will dive deeper into the "Table View".

5.2.1 Tables

This is a very straight forward tab; it contains only two controls.

Value	Details
UP/Down Control	This the control at the top of the "Tables" tab, it is used to traverse through the tables displayed in the List below. Clicking The up or down button changes the currently selected table which in loads the data grid on the right
The table list	This is the second control; it contains a list of all the table recognized in the document together with their IDs'. Clicking on any one of them will load the selected table in the Data grid on the right.

5.2.2 Grouped Tables

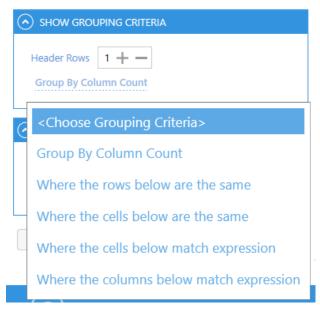

By default, Kingfisher can extract all structured data in a PDF file and write it to a ".csv" or ".xlsx" file. We also understand that users might not want to extract all the tables found in a document or the user might want to group some similar tables into one group with a common header.

Because of the issues raise in the preceding paragraph, we have decided to give the user the ability to group/exclude tables and edit the headers. The following sections will explain this in more depth.

Tables Grouped Tables		Column 1 🦸	Column 2 🧳	Column 3 🖋
			High performance	4.02
(↑) (↓) 1 /1		Kingfisher	Extraction	1.1
		Searchlight	SharePoint	1.2
Group ID: 1	Table ID : 0	PDF Junction	PDF	3.4
SHOW GROUPING CRITERI	Table ID . 0	TIFF Junction	OCR	4.1
	Table ID : 1	Tabula DX	Search Engine	1.4
Header Rows 1 + -	Table ID : 2	TIFF Server	TIFF Viewer	4.0
Group By Column Count		TIFF Archive	TIFF to PDF	1.0
		OCR SDK	OCR, IRIS	2.2

		Searchlight	SharePoint	1.2
<choose criteria="" exclusion=""></choose>		PDF Junction	PDF	3.4
		TIFF Junction	OCR	4.1
		Tabula DX	Search Engine	1.4
GROUP T	ABLES	TIFF Server	TIFF Viewer	4.0
		TIFE Archive	TIFE to PDF	10

5.2.2.1 Grouping Criteria

This section explains how users can group various tables based on the grouping criteria offered by Kingfisher.

• Header Rows: If you are writing a group of say 5 tables to a ".csv" file, the table header will be repeated for each table thus the final CSV file won't be very clean. As result, Kingfisher will skip the first "n" rows provided in the header rows control.

5.2.2.1.1 Group by Column Count

This is a straight forward option; it simply groups all the tables with the same number of columns. This option will also allow to change the provide the header rows (See 1.2.3).

5.2.2.1.2 Where the rows below are the same

This criterion will check all the tables for the row specified and group the tables based on identical rows. The example below will group all the tables with the same first row as one group.

Unfortunately, you can't save headers for this type of criteria, this is because the table types recognized here are not very predictable and will vary across different files. We decided to disable that feature to avoid putting wrong headers on tables.

Checking the Use Row as Header Check Box will use the Row Matched as the header row.

Where the rows below are the same

5.2.2.1.3 Where the cells below are the same

This is the same as the previous option, the only difference is that it compares a single cell instead of the whole row.

Unfortunately, you can't save headers for this type of criteria, this is because the table types recognized here are not very predictable and will vary across different files. We decided to disable that feature to avoid putting wrong headers on tables.

Checking the Use Row as Header Check Box will use the Row Matched as the header row.

Where the cells below are the same

Row	Columr
2	5
Use Row As Header	

5.2.2.1.4 Where cells below match expression

This option groups all the tables where the cells provided below matches the Regular Expression given. Note, you can use the '+' button to add more items

This option will also allow to change the provide the header rows (See 1.2.3).

Checking the Use Row as Header Check Box will use the Row Matched as the header row.

Where the cells	s below match	expression +
Row	Column	Expression
2	5	[0-9]{9}
Use Row As	s Header	

5.2.2.1.5 Where Columns below match expression

This option groups all the tables where the columns provided below matches the Regular Expression given. Note, you can use the '+' button to add more items

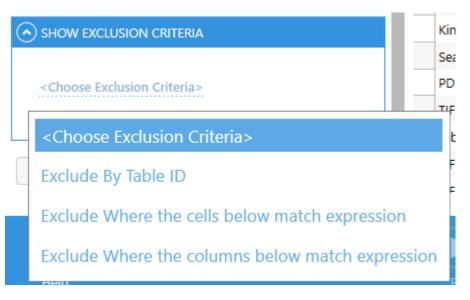

This option will also allow to change the provide the header rows (See 1.2.3).

Checking the Use Row as Header Check Box will use the Row Matched as the header row.

Where the columns belo	ow match expr +		
Column	Expression		
5)-9]{9}		
Use Row As Header	1		
Column	Expression		
1	Regex cannot	be En	npty
Use Row As Header	Ē		

5.2.2.2 Exclusion criteria

Kingfisher also allows the Users to exclude table with characteristics they are not interested in, to use this feature you will have click on the "Show Exclusion Criteria" Expander to view the various option

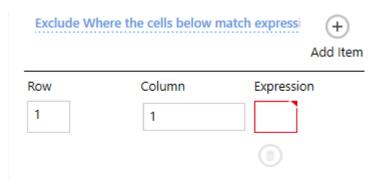

5.2.2.1 Exclude by Table ID

This option simple excludes any table with the ID provided below.

5.2.2.2.2 Exclude cells below match expression

This option excludes all the tables where the cells provided below matches the Regular Expression given. Note, you can use the '+' button to add more items

5.2.2.2.3 Exclude Where Columns below match expression

This option excludes all the tables where the columns provided below matches the Regular Expression given. Note, you can use the '+' button to add more items.

Exclude Where	the columns below match exp + Add Item	
Column	Expression	н
1	Regex cannot be Emp	oty

5.2.3 Data grid

The main use of the data grid is to show the users the data that has been extracted from the PDF file, you can also use it to Edit headers (If the pen symbol appears next to the header) as shown Below. After editing, just click the save job button.

	AQUAFOREST SOFTWARE	1	KEYWORDS		Column 3	1
	Autobahn DX		High performar	nce	4.02	
	Kingfisher		Extraction		1.1	
	Searchlight		SharePoint		1.2	

6 ADVANCED EXPORT TO CSV/XLSX

This is step extract text based on certain keywords in a PDF file, it is used to extract text that appears after or before a certain expression, this can be used to process a collection of invoices, receipts and forms. The impressive part of it is that it uses OCR if need be so users with image PDF files need not worry. The values extracted will be written to a csv file where the expression will be the column header.

Below is a step by step guide to using the Smart Text Extraction

1. Choose the "Export PDF Content" \rightarrow "Advanced Export to CSV/XLSX" step then go to the "Select Variable" tab. As you can see it is very similar to the select variables tab in section 2.2.2 but for a few extra options explained in the table below.

Kingfisher Variables			Add Item 🕂	→ 100% ▼ Zoom In/Out			ට ad File

Value	Description
Copy Across Rows	Check this box if you want a value like "Invoice Number" that appears only once in a page to be copied across all rows in that page.
Multiline Column	Check this box if you want the different lines in a zone to be extracted as different values.
Invoice Column	Select this option if the current column is part of an invoice, this will make sure kingfisher gets the multiline values. Note Kingfisher will use the first column you add as a marker for the rest in the invoice.
Remove Expressions Values	This option will trim the text extracted to the first occurrence of any "Column Expression Value" in the job

No of values	Say there is more than one occurrence of an expression in the selected zone, this number control will you to set the maximum amount of values that should be extracted per zone.
Pages	This allows the user browse through the loaded pages.

2. Select a zone you want to extract the text from, enter the Expression which you want to extract the text next to it, to extract the name "Aquaforest Test", enter "To:".

Kingfisher Variables			Add Item 🤆	+)	→ 100% ▼ Zoom In/Out	Pages		🔊

7 XML JOB DEFINITION FILES

Any job created in kingfisher is saved in a job definition file, these are xml files usually created in the conditions folder. These files can be used to execute jobs from the Command line using the –JobFile parameter.

Developers may wish to create or generate XML job files using the information below.

A sample job file is shown here:

<pdfsplitterJob> <operation>renametext</operation> <jobid>10000</jobid> <conditionname> Job 10000</conditionname> <jobspecialoptions> </jobspecialoptions> <joboptions> -language 0</joboptions> <pagerangeoption>0</pagerangeoption> <splitrange> </splitrange> <frompage>1</frompage> <topage>9999</topage> <splitmode> </splitmode> <splitrepeatingrange> </splitrepeatingrange> <maxcores>1</maxcores> <condition>rename</condition> <usenametemplate>False</usenametemplate> <outputnamemask>%VALUE1%</outputnamemask> <sourcefiles>C:\Aquaforest\Kingfisher\Input\Text Match\postcode.pdf</sourcefiles> <password> </password> <target>C:\Aquaforest\Kingfisher\output\Text Match</target> <sourcetype>file</sourcetype> <casesensitive>False</casesensitive> <advancedflags> </advancedflags> <metadata> </metadata> <security> </security> <docoptions> </docoptions> <value1location>1.57:8.73:120.4:43.87</value1location> <nomatchfilename> </nomatchfilename> <nomatchoption>1</nomatchoption> <uselines>False</uselines> <extractgroup>False</extractgroup> <writehead>False</writehead> <appendcsv>false</appendcsv> <usefirsttableforall>False</usefirsttableforall> <usewords>False</usewords> <useworksheets>False</useworksheets> <mincolumns>1</mincolumns>

	Aquaforest Technical team.			
logfile	If specified, output will be logged to a file with this name in			
TextExtraction	This contains the definitions of text to be extracted			

8 Using Kingfisher from the command line

Kingfisher can be accessed via the command line to run rules that have already been created in the GUI. You can also run kingfisher directly from the command line.

The executable used for running Kingfisher from the command line is "Kingfisher.Commandline.exe"

8.1 Using Job Definition File

This is the preferred and safest method to run kingfisher from the command line, this method ensures you set up the job correctly and you are sure of what it does.

If you create a Job in Kingfisher, an xml Job Definition file is automatically created in the "conditions" folder in the installation Directory.

Usage:

Kingfisher.Commandline.exe -jobfile "..\\conditions\\1001.xml"

9 AUTOBAHN DX INTEGRATION

Autobahn DX is another software provided by Aquaforest, it is a Document Processing product designed to fit into an organization's document workflow. It can process and convert a variety of different types of document including TIFF images, Microsoft Office documents and HTML pages, convert those documents to searchable PDFs and perform a variety of other customizable activities. For more information on Autobahn DX, check the product page by clicking the link below.

https://www.aquaforest.com/en/autobahn.asp

A Kingfisher Job can now be set up in Autobahn DX, for more details, see the blog post below.

10 KINGFISHER FILES AND DIRECTORIES

After installation, the following subdirectories are created in the Kingfisher install directory:

Directory	Contents			
bin	Executables and Scripts.			
docs	Reference Guide, Sample videos			
conditions	Standard directory for XML Job definition files.			
logfiles	Log files			
regex	This folder contains files that can be used to store			
	predefined regular expressions			
license	License File.			
samples	This folder contains sample files used in the sample jobs.			
theme	This folder contains the file that keeps track of the current			
	theme.			
Status	Contains status file, for progress reports.			

11 SUPPORT

Any problems running this application should give evident error messages, but if you are unable to resolve a problem please contact support@aquaforest.com
