
Kingfisher Release Notes

December 2018
Version 2.1

Minor Version 2.1.181218

1 UPGRADING FROM EARLIER VERSION

1.1 Requirements

This release requires both version 3.5 and version 4.6 of the .NET framework. The setup will check whether they are installed on your system and if not, will take you to the appropriate Microsoft site to download and install.

1.2 Preserving Existing Job Definitions when Upgrading

Existing job definition and status files from earlier versions are not compatible with Version 2.1. Kingfisher will Upgrade these files when the GUI is opened for the first time.

The job definition files are in the “conditions” and “status” folders in the product installation folder. If the new release is installed in a different location (which by default was installed under “C:\ Aquaforest\kingfisher\” these folders may be copied to the new location.

1.3 License Keys

This version has the same license key as version 2.0.

If you have any questions about upgrading to version 2.1 please contact Aquaforest support: support@aquaforest.com

2 New Features

2.1 SharePoint Integration

We have added the ability to use SharePoint and Office 365 document libraries as source and destination locations for kingfisher. As a result, we have added a new tab to the kingfisher Job settings as shown below. See section 2.2.2 of the reference guide for more details.

Job Definition [Location Settings](#) [Select Variables](#) [Scheduler](#) [Alerts](#) [File Naming](#) [Advanced Settings](#) [Running Job](#)

Select your Input and Output locations below

Source

Location Type

File System

Single File Folder Tree

Source

J:\QA Folder\Kingfisher QA\Input\Advanced.csv

Destination

Location Type

Same as Source

Apply Input Filters

* Filter Locations by Regular Expression

Excluded Locations:

Metadata Settings

Retain PDF Metadata

Off

Retain SharePoint Metadata

Off

Log File

C:\Aquaforest\Kingfisher\logfiles\Job 10000\%TIMESTAMP%.txt

2.2 Filter Locations by Regular Expression

You can now specify patterns that input file must match before they can be processed in kingfisher. See section 2.2.2 of the reference guide for more details.

2.3 Excluded Locations

You can now specify paths that will be skipped by kingfisher. See section 2.2.2 of the reference guide for more details.

2.4 Skip Row Header

We have added the option for the “Advanced Extract to Excel” step to skip the header row if you wish to output many files to the same XLS/CSV.

Advanced Export to CSV/XLSX

Output File

.csv

Append Data to Existing File

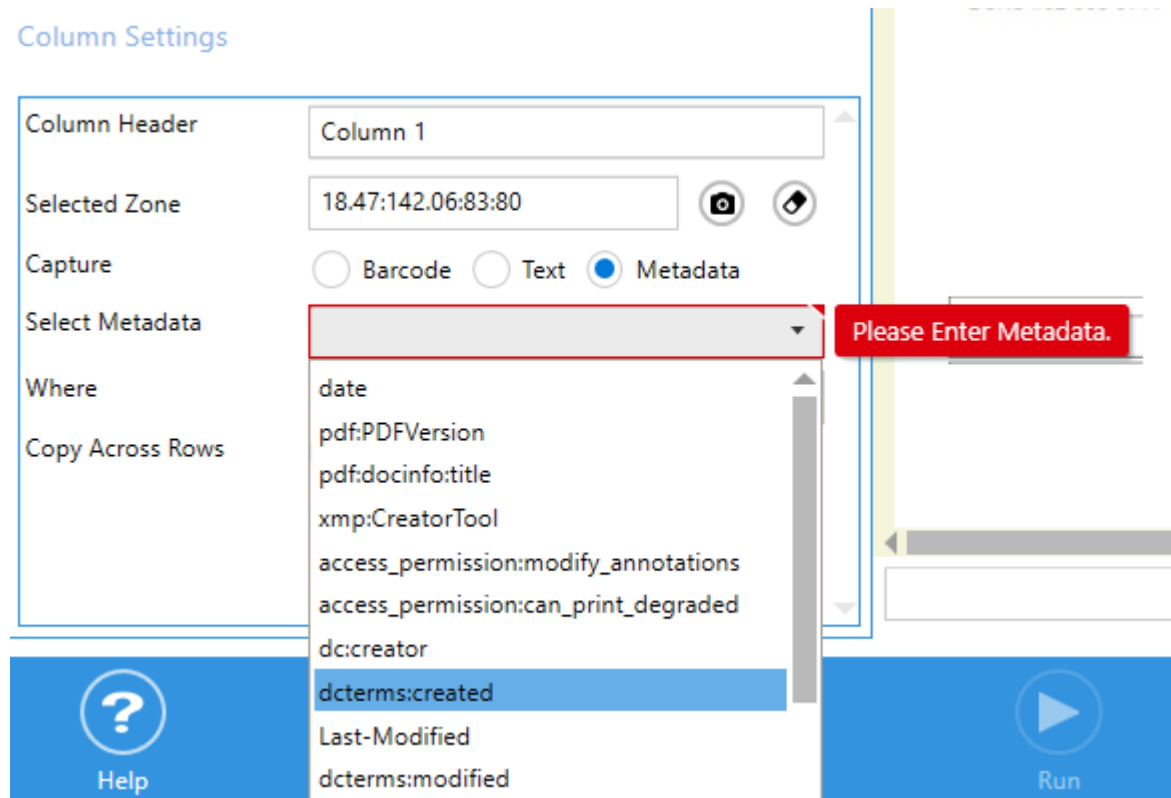

True

Skip Header Row

On

2.5 Extract Metadata to csv

We have added the ability to extract Metadata from PDF Files as part of the “Advanced Export to CSV/XLSX”.

3 Improvements

3.1 Data Matrix Barcodes

The former versions of Kingfisher struggled with recognizing Data Matrix barcodes, we have improved this in version 2.1.
